SUMMARY

Software Engineer with experience building production-grade backend systems, GenAI-powered automation, and client-facing web applications. Proficient in **Python, Java, SQL, Node.js, and React.js**, with hands-on work in **LLM integration, REST API design, CI/CD** practices.

EXPERIENCE

BOSTON CONSULTING GROUP

Software Engineer

Aug 2025 – Present

Gurugram, HR

- Architected and maintained scalable **Java (Spring Boot) microservices** for BCG Research Vantage's internal content platform, supporting end-to-end content sanitization and publish workflows at enterprise scale.
- Built **LLM-based auto-tagging and auto-sanitization services** that reduced manual content-processing effort and expanded adoption of AI-assisted workflows in production.
- Improved GenAI service reliability by about 70% by building **unit, integration, and regression coverage** across critical service paths.
- Reduced service response time by 20-25% through **Datadog-based performance analysis**, bottleneck isolation, and targeted optimization recommendations.
- Automated ad hoc** and scheduled **multi-source data extraction with Python scripts**, replacing manual pulls and shortening turnaround time for recurring internal requests.
- Partner directly with stakeholders to **review ServiceNow tickets**, track open bugs, prioritize fixes, and resolve production issues, expanding ownership from development into product and operational support.
- Run **SonarQube and Prisma scans** across repositories to surface code-quality and security vulnerabilities early, improving release readiness and remediation discipline.

ULAI

Software Engineer Intern

May 2025 – Jul 2025

Bengaluru, KA

- Built **backend APIs** for DoxScribe, an AI-powered medical transcription SaaS, enabling automated generation of structured clinical reports from unstructured audio and text input using **LLM pipelines**.
- Designed and optimized **Node.js REST APIs** and SQL queries powering analytics data pipelines, improving data retrieval performance and reporting reliability for production workflows.
- Developed and shipped **full-stack features** for the ULAI client analytics dashboard using React.js (Vite) and Node.js, improving data visibility and enabling real-time KPI tracking for business users.
- Integrated **third-party APIs** into backend services, applied version control best practices via Git, and maintained deployment-ready code through **consistent CI/CD pipeline** participation.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript

Frameworks & APIs: Spring Boot, Node.js, Flask, REST API design, third-party API integration

Platforms and Tools: ServiceNow (ticket triage), SonarQube, Prisma, AWS, Docker, Linux, Datadog

Data and AI: GenAI / LLMs, Agentic Workflows, NLP, Machine Learning, Data Pipelines, Reporting Automation

EDUCATION

BSc. in Computer Science, Mathematics and Statistics (Triple Major)

2022 — 2025

CHRIST, Bangalore, CGPA: **3.87/4.0**

PROJECTS

FoodRay - Food Redistribution App

Built a cross-platform app using **Flutter & Firebase** to connect restaurants with NGOs for surplus food redistribution. Implemented **real-time updates, authentication, and role-based access**, enabling efficient food listing and distribution.

Sentiment Analysis and Enhanced Well Being

[Project Link](#)

Built an **NLP pipeline with statistical modeling (Chi-square)** to analyze sentiment in text and speech data.

Developed an interactive dashboard to visualize trends and support data-driven insights.

ACHIEVEMENTS

- Runner**, Hacktech 2023 – IKST (Indo-Korea Science and Technology Centre)
- Winner**, Science Exhibition – School of Sciences, Christ University
