SUMMARY

Software Engineer with experience building Java and Spring Boot microservices, REST APIs, and React-based enterprise web applications for production environments. Hands-on with AWS, Docker, SQL, performance tuning, CI/CD participation, automated testing, production issue resolution, and Agile/Scrum delivery using Jira across enterprise platforms.

EXPERIENCE

BOSTON CONSULTING GROUP

Software Engineer

Aug 2025 – Present

Gurugram, HR

- Designed, developed, and maintained Java and Spring Boot microservices for BCG Research Vantage's internal web application platform, supporting production content sanitization and publishing workflows at enterprise scale.
- Increased GenAI service reliability by about 70% by introducing unit, integration, and regression test coverage across critical services.
- Reduced service response times by 20 to 25% through Datadog-based performance analysis, bottleneck isolation, and targeted performance tuning.
- Integrated SonarQube and Prisma scans into repository workflows to surface code-quality and security issues earlier, improving release readiness.
- Triaged and resolved production data issues via ServiceNow, collaborating directly with business stakeholders to extract requirements, clarify data models, and prioritize fixes - working within an Agile/Scrum team cadence
- Automated ad hoc and scheduled multi-source data extraction with Python, eliminating manual pulls and accelerating turnaround for recurring internal requests.
- Built LLM-powered auto-tagging and auto-sanitization services that reduced manual content-processing effort and expanded adoption of AI-assisted workflows in production.

ULAI

Software Engineer Intern

May 2025 – Jul 2025

Bengaluru, KA

- Developed backend APIs for DoxScribe, an AI-powered medical transcription SaaS, enabling structured clinical report generation from unstructured audio and text through LLM pipelines.
- Designed and optimized Node.js REST APIs and SQL queries powering analytics data pipelines, improving data retrieval performance and reporting reliability for production workflows.
- Delivered full-stack features for a client analytics dashboard using React.js and Node.js, improving data visibility and enabling real-time KPI tracking for business users.
- Integrated third-party APIs into backend services, used Git-based version control, and supported deployment-ready releases through regular CI/CD participation.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript

Backend: Spring Boot, Microservices, REST APIs, Node.js, Flask

Frontend: React.js, HTML

Cloud / DevOps / Tools: AWS, Docker, Git, Linux, CI/CD, Jira, ServiceNow, SonarQube, Prisma, Datadog

Data and AI: GenAI / LLMs, Agentic Workflows, NLP, Machine Learning, Data Pipelines, Reporting Automation

EDUCATION

BSc. in Computer Science, Mathematics and Statistics (Triple Major)

2022 — 2025

CHRIST, Bangalore, CGPA: **3.87/4.0**

PROJECTS

FoodRay - Food Redistribution App

Built a cross-platform app using **Flutter & Firebase** to connect restaurants with NGOs for surplus food redistribution
Implemented **real-time updates, authentication, and role-based access**, enabling efficient food listing and distribution

Sentiment Analysis and Enhanced Well Being

[Project Link](#)

Built an **NLP pipeline with statistical modeling (Chi-square)** to analyze sentiment in text and speech data
Developed an interactive dashboard to visualize trends and support data-driven insights

ACHIEVEMENTS

- Runner**, Hacktech 2023 – IKST (Indo-Korea Science and Technology Centre)
- Winner**, Science Exhibition – School of Sciences, Christ University
