

Software Engineer at BCG with over 1 year of experience building scalable backend systems and GenAI-powered automation pipelines. Experienced in Python and SQL, with expertise in LLM integration, workflow automation, cloud platforms, microservices, and REST APIs.

EXPERIENCE

Boston Consulting Group (BCG)

Software Engineer

Aug 2025 – Present

Gurugram

- Built an end-to-end AI workflow using Snowflake and Azure OpenAI to retrieve case data, route by project type, and generate sanitized titles with dynamic prompting; implemented human-in-the-loop approval and automated Outlook notifications.
- Maintained LLM-based auto-tagging and auto-sanitization services for BCG's internal content platform, reducing manual content-processing effort and accelerating adoption of AI-assisted workflows in production.
- Increased GenAI service reliability by ~70% by authoring a comprehensive unit, integration, and regression test suite covering 14+ critical service paths, reducing production incidents to near-zero.
- Hardened codebase security and release quality by running SonarQube and Prisma scans across 4 repositories, proactively identifying and resolving all critical and high-severity vulnerabilities before production deployment.
- Automated 4+ recurring multi-source data extraction and reporting workflows in Python, eliminating 8 hrs/week of manual analyst effort and reducing turnaround times from days to minutes.
- Reduced API response latency by 20–25% through Datadog-driven performance profiling, identifying 3 key bottleneck endpoints and implementing targeted query optimization and caching improvements.
- Owned the end-to-end bug lifecycle through ServiceNow, triaging, prioritizing, and resolving 30+ production tickets while collaborating with cross-functional stakeholders to ensure timely issue resolution and platform stability.
- Contributed to Java (Spring Boot) microservices for BCG Research Vantage's internal content platform, supporting content sanitization and publish workflows at enterprise scale.

ULAI.AI

Software Engineer Intern

May 2025 – Jul 2025

Bengaluru

- Built backend APIs for DoxScribe, an AI-powered medical transcription SaaS, enabling automated generation of structured clinical reports from unstructured audio and text input using LLM pipelines.
- Designed and optimized Node.js REST APIs and SQL queries powering analytics data pipelines, improving data retrieval performance and reporting reliability for production workflows.
- Developed and shipped full-stack features for the ULAI client analytics dashboard using React.js (Vite) and Node.js, improving data visibility and enabling real-time KPI tracking for business users.
- Maintained CI/CD pipeline hygiene across 2 active repos, integrated 3rd-party APIs, enforced Git branching conventions, and maintained deployment-ready build status throughout the internship.

SKILLS

Languages: Python, SQL, React, Java

Backend & Frontend: FastAPI, Flask, REST APIs, Microservices, Spring Boot

Cloud, DevOps & Tools: AWS, Docker, Snowflake, Git, CI/CD, Kafka, Datadog

AI/ML: LLM Integration, n8n, Power Apps, NLP, MCP Server

Computer Science Fundamentals: Data Structures & Algorithms, OOPs, DBMS, Operating System

EDUCATION

BSc. Computer Science, Mathematics and Statistics, Christ University, Bangalore

2022 – 2025

CGPA: 3.87/4.0

PROJECTS

FoodRay – Food Redistribution App

Dec 2024 – Mar 2025

- Developed a cross-platform Flutter and Firebase application connecting verified restaurants with NGOs to facilitate surplus food redistribution and reduce food waste.
- Implemented Firebase Authentication, role-based access control, food categorization, and real-time data synchronization for secure and efficient food listing and distribution.

Sentiment Analysis and Enhanced Well-Being Using NLP

Mar 2024 – Jun 2024

- Developed an NLP pipeline using VADER sentiment analysis and Chi-square statistical modeling to analyze emotional patterns across text and speech-based user responses.
- Built an interactive dashboard to visualize sentiment trends and generated personalized well-being recommendations based on analyzed behavioral patterns.

AWARDS AND RECOGNITIONS

Runner, Hacktech 2023 – IKST (Indo-Korea Science and Technology Centre)

Dec 2023

Winner, Science Exhibition – School of Sciences, Christ University

Mar 2024
